Appendix

WCAG Guidelines Reference

Tested Level: WCAG 2.1 Level AA

Level AA addresses the most common barriers for disabled users. It includes all Level A criteria plus additional requirements for color contrast (4.5:1 minimum), resize text up to 200%, and consistent navigation. This is the standard most organizations target.

Methodology

- Automated scanning was performed using axe-core accessibility testing engine.
- Each page was audited for WCAG accessibility criteria as configured in the campaign.
- Issues are classified by severity: critical, serious, moderate, and minor.
- Scores are calculated on a 0–100 scale based on the ratio of passed rules to total applicable rules.
- Results reflect the state of pages at the time of scan and may change as sites are updated.

Disclaimer

This report is generated by an automated compliance scanning tool and should be used as a guideline only. Automated testing can identify many common accessibility issues but cannot detect all barriers. Manual testing by users with disabilities and accessibility experts is recommended for complete WCAG conformance evaluation. The scores and findings in this report do not constitute a legal compliance certification.
